### NEW ABSTRACT

To communicate in a wireless network, resources of at least one node (20A) of the wireless network are pre-allocated (44). The pre-allocated resources (44) comprise resources normally allocated in response to a call setup request. A first call setup request is received after pre-allocating the resources, and in response to the first call setup request, a packet-switched real-time, interactive communications session is established through the wireless network using the pre-allocated resources of the at least one node (20A).
